

Basics

Martha Hoffmann Session I RLI, 16.09.2019

Aim of this session

Theoretical and practical introduction to using oemof

All workshop contents at: https://github.com/smartie2076/oemof workshop

Motivation for open source tools

Open source software is crucial to ...

- meet scientific standards in software based research
- foster bottom-up approaches by reducing barriers associated with high license cost of proprietary software tools
- improve research quality & completeness & knowledge pooling due to collaborative modelling

What is the main idea behind oemof?

Community-driven open-Source modelling framework initiated by:

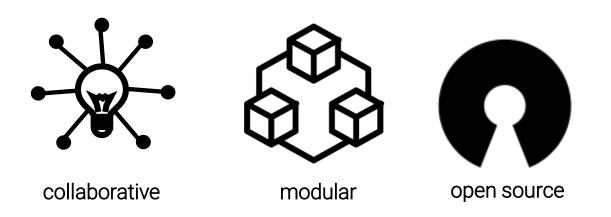

- Python package/library specifically developed for energy system modelling
- Model individual requirements/aspects in research projects, dissertations, Bachelor/-Master thesis
- Official website: http://oemof.org

What is the main idea behind oemof?

- Collaborative, public development
- Recycling and expansion of existing models
- Modular structure with defined interfaces to correlate other approaches/packages
- Improved review process by the community

Oemof projects at RLI

- Research projects
 - Publicly funded by EU, BMWI, BMWF
- Research studies
- Contract work
 - Model development
 - Workshops
 - Web-applications
- General oemof uses: https://oemof.org/projects/

des Deutschen Bundestages

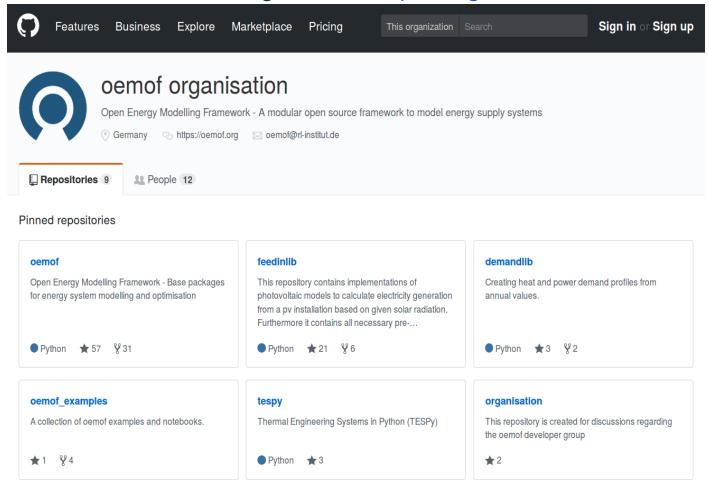

Github reprositories of oemof

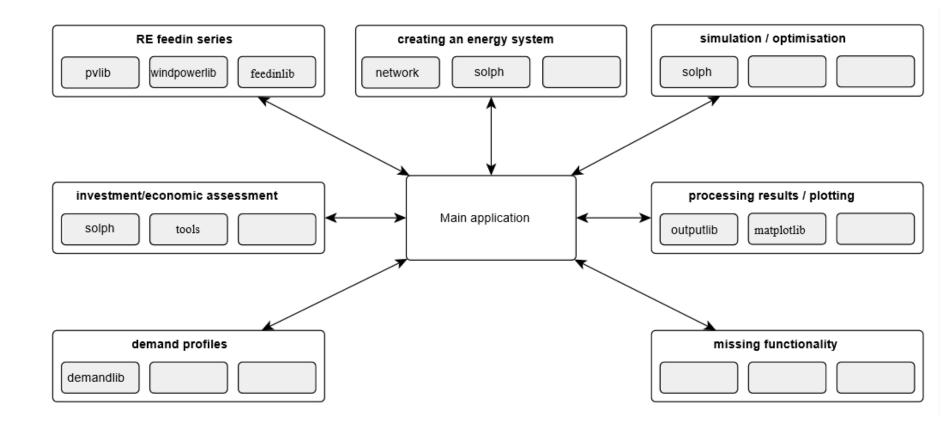

Oemof toolbox on github: https://github.com/oemof

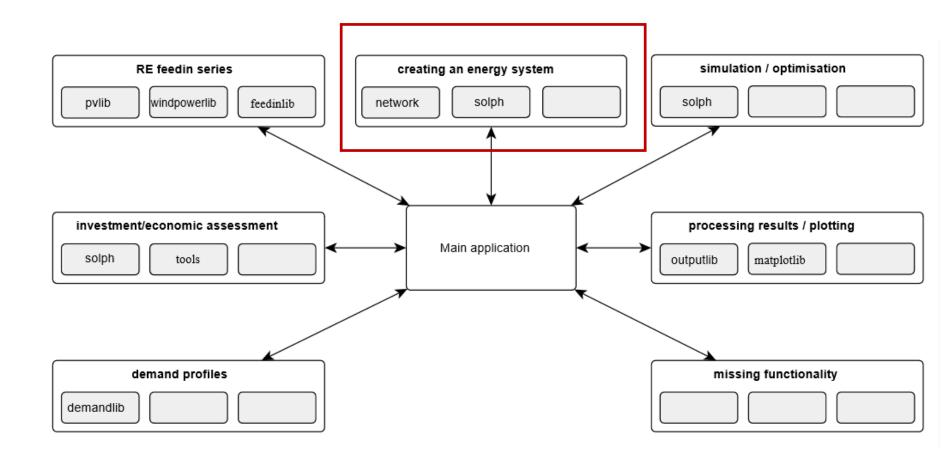

Package structure

Package structure

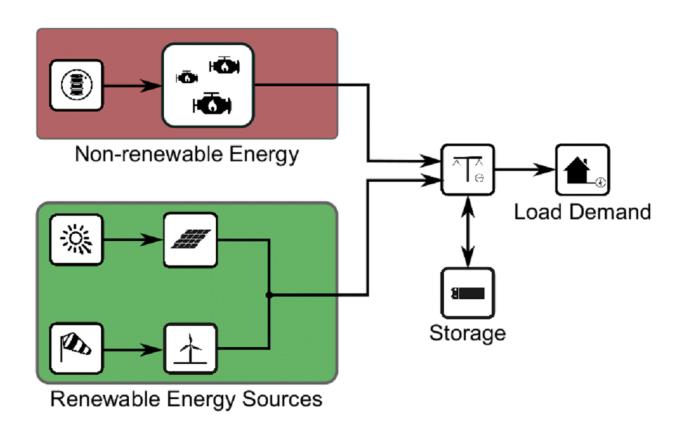

13

Actual energy system to be simulated

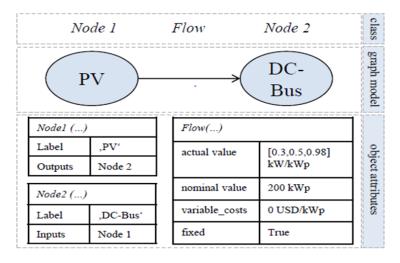

Source/Caption:

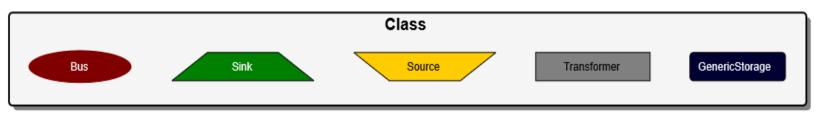

Available oemof components

- Graph-based modelling:
 - Energy system build by Nodes, which are uni-laterally connected with Flows

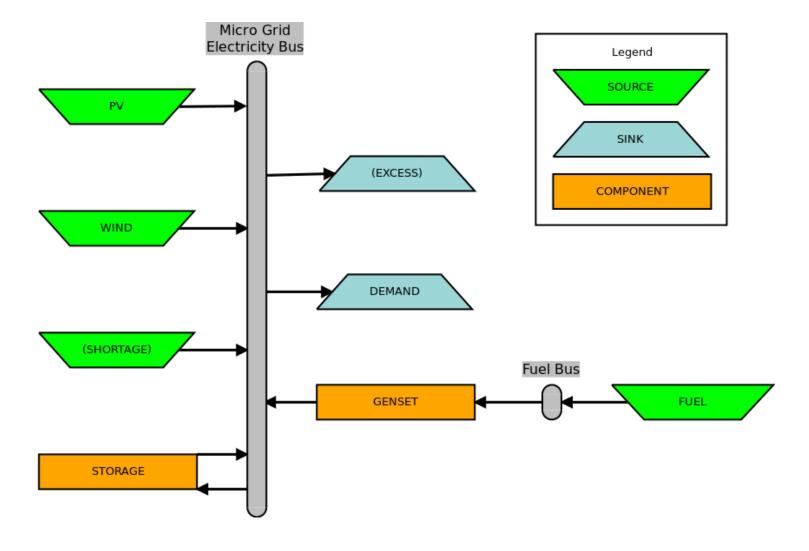

► Main node classes / components:

Simplified, oemof-compatible system

Optimizing with oemof - Objective value

- Oemof generates a linear equation system describing the energy system model
- Solves for the minimal objective value (total costs)
- ► Target function:

$$\min \sum_{i} (Capex(i) * CRF(i) + Opex_{fix}(i)) * P_{inst}(i) + \sum_{i} \sum_{t} Opex_{var}(i) * E_{gen}(i,t)$$

$$i \in \{WEA, PV, BHKW, Speicher\}$$

 $t \in \{1...8760\}$

Capex	Capital expenditure	EUR/kW
CRF	Capital recovery factor	-
$Opex_{fix}$	Fixed operational expenditure	EUR/(kW*a)
$Opex_{var}$	Variable operational expenditure	EUR/kWh
P_{inst}	Capacity of component	kW
\mathbf{E}_{gen}	Generated electricity per timestep	kWh
i	Index of system components	-
t	Index of time steps	-

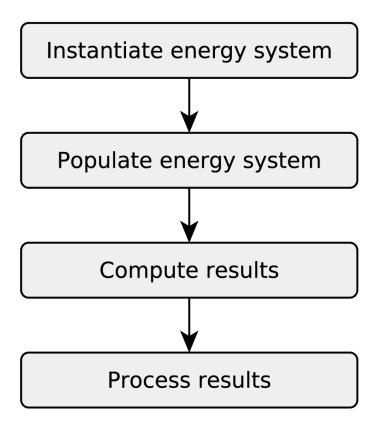

Installation of oemof

- Necessary to install:
 - Python programming environment (eg. pycharm)
 - Package manager (eg. miniconda)
 - Solver (eg. coinor-cbc)
 - Python library oemof
- More information:
 - Slides: Oemof_Workshop_02_Installation.pptx
 - Youtube tutorial for Windows: https://www.youtube.com/watch?v=eFvoM36_szM

Building an own oemof application

Data requirements of an oemof model

- Economic parameters:
 - Fix and variable cost of the system components
 - For internal processing of costs: WACC, project lifetime
- ► Timeseries with values for each timestep:
 - Sources (non-dispatchable generation)
 - Sinks (non-dispatchable demands)
- ► Technical parameters:
 - ► Transformer (eg. generator) efficiencies
 - Technical storage parameters

Download coding examples

- Download git reprository of this workshop from git: https://github.com/smartie2076/oemof_workshop
- ► To execute jupyter notebooks:
 - Open terminal, move to folder /oemof_workshop
 - Create environment and install requirements

```
pip install -r requirements.txt
```

Execute

jupyter notebooks

Tutorials - Jupyter notebooks

- ▶ Dispatch optimization with fixed capacities: ./Day_1_Oemof_Basics/1a_tutorial_dispatch.ipynb
- Investment and dispatch optimization: ./Day_1_Oemof_Basics/2a_tutorial_investment_optimization.ipynb

Tasks - Jupyter notebooks

- Dispatch with fixed capacities: ./Day_1_Oemof_Baoptimizationsics/1b_task_dispatch.py
- Investment and dispatch optimization: /Day_1_Oemof_Basics/2b_task_investment_optimization.py
- → Solutions are provided

26

Working with oemof

- Download and use oemof
- Register on and post and discuss issues on:
 https://forum.openmod-initiative.org/tags/c/qa/oemof
- Indicate or post own projects/coding examples via mail or github
- Find documentation on:
 http://oemof.readthedocs.io/en/stable/
 - Register errors in documentation via mail or issue or pull request (github)
- Find oemof examples on:
 https://github.com/oemof/oemof_examples

Helping oemof develop

Documentation

- Register or correct spelling and grammar mistakes
- Re-write sections that are unclear
- Add missing explainations

Code

- Register or fix bugs
- Fix docstring or code layout
- Create and submit own components or constraints
- Add own features or implement requested features
- When developing: Fork/clone oemof reprository: http://github.com/oemof/oemof

Oemof user&developer meetings

- Yearly user&developer meetings
- ► Half-yearly developer meetings
 - Next meeting: 4. to 6.12.2019, Berlin
 - Register and develop agenda on: https://oemof.org/2019/09/11/oemof-turns-5- anniversary-developer-meeting-in-december-2019/

THANK YOU FOR YOUR ATTENTION!
